On the other hand, the fact that the *in vitro* and *in vivo* results are in good agreement, and that the *in vivo* results are in good agreement with the results of the *in vitro* studies, suggests that the *in vitro* studies are a good model for the *in vivo* situation. This is particularly true for the *in vitro* studies that were performed in the presence of the *in vivo* conditions, such as the presence of the *in vivo* conditions.
